ТАБЛИЦА ПРИМЕНЯЕМОСТИ

БОЛЬШЕ ТРЕБОВАНИЙ К ЭНЕРГОПОТРЕБЛЕНИЮ ЧЕМ РАНЬШЕ

В последние годы, энергопотребление современных автомобилей выросло на 300%. Для того, чтобы выбрать правильную батарею, уже недостаточно знать объем и мощность двигателя и установленное электрооборудование, но также надо знать даже климат и условия вождения.

**EXIDE
EVOLUTION**

Программа Exide Evolution разработана для того, чтобы помочь выбрать правильную батарею.

Программа Exide Evolution гарантирует выбор наиболее подходящей батареи для удовлетворения ваших требований.

ПРЕИМУЩЕСТВО

EXIDE PREMIUM

Exide Premium выдает энергию, высокую емкость и пусковую мощность – все находится в одной батарее.

Высокотехнологичный производственный процесс, особое качество материалов позволило разработать батарею с:

1. увеличенным сроком эксплуатации по сравнению со стандартной батареей благодаря:

- лучшему сопротивлению к разряду и лучшему заряду из-за улучшенного сцепления активной пасты с металлической решеткой;
- резерву большей емкости, обеспеченной использованием более толстых пластин;
- лучшему сопротивлению к коррозии, достигнутой использованием метода вытяжки решетки (Exmet) и использованием усовершенствованных металлических сплавов.

2. высокой пусковой мощностью и устойчивостью при всех погодных условиях, приводящая к значительно большему количеству пусков двигателя.

Аккумулятор всегда должен иметь достаточную пусковую мощность, приспособленную к объему и мощности двигателя. Используйте, рекомендованные производителем автомобиля, минимальные параметры аккумулятора.

Пусковая мощность это ток пуска (в Амперах согласно EN [A(EN)]) поставляемый аккумулятором.

Для мощных бензиновых двигателей и для двигателей дизельный требуется пусковая мощность, которая является важным критерием выбора.

1 ОБЪЕМ И ВИД ДВИГАТЕЛЯ

Каждый автомобиль, в зависимости от мощности, уровня оснащения, его использования или условий, в каких работает, имеет свой индивидуальный запрос на энергию.

стандартно
используемый
автомобиль

интенсивно
используемый
автомобиль

4 УСЛОВИЯ ИСПОЛЬЗОВАНИЯ

Интенсивный способ использования характеризуется увеличенным количеством пусков автомобиля и преодолеванием коротких дистанций, что приводит к использованию дополнительной энергии аккумулятора. Система зарядки в автомобиле (альтернатор) не всегда достаточно зарядит аккумулятор во время езды на коротких дистанциях, чем снижает его объем и приводит к краткому времени пользования.

У случаи интенсивного использования, аккумулятор должен обладать высшим объемом для удержания долгого периода использования и его потенциала.

Аккумулятор является источником энергии, поставляемой по всему автомобилю. Количество доступной энергии в системе электричества пропорциональна к объему аккумулятора, измеряемая в Амперах на час (Ah).

Новейшие автомобили оснащены многими устройствами безопасности, повышающими комфорт и удобство: кондиционер, GPS, DVD, сидение с подогревом и т.д.

Чем выше уровень оснащения, тем больше объем аккумулятора требуется для поставки необходимой энергии, установленным в автомобиле устройствам.

ОСНАЩЕНИЕ 2

стандартное оснащение:

- компьютер;
- радио и CD;
- сигнализация;

богатое оснащение:

- кондиционер;
- навигация GPS;
- расширенная аудио-видео система/DVD;
- сидение с подогревом;
- расширенная система отопления;
- дополнительный тюнинг оснащения;

КЛИМАТ 3

Экстремальная температура может влиять на работу аккумулятора и время его использования. Высокая температура работы разрушает активный материал в коробке и приводит к коррозии решетки. Это влияет на работу аккумулятора и сокращает время его использования (в два раза при каждом повышении температуры работы на 10°C).

Ускоряет также процесс саморазрядки, влияет на работу и уменьшает объем аккумулятора (в два раза при каждом повышении температуры на 10°C). Работа при высокой температуре, необходимо подобрать аккумулятор большего объема – для удержания его потенциала и долгого времени использования. В условиях холодного климата растет внутреннее сопротивление в аккумуляторе, снижается его пусковая способность и способность принятия разряда. Автомобили работающие в таких условиях нуждаются в аккумуляторах с высшим током пуска для обеспечения надежности запуска двигателя.
